## IN THE CLAIMS

Please amend the claims as follows, substituting any amended claim(s) for the corresponding pending claim(s):

## Claims 1-16. (Cancelled)

17. (currently amended) A microsequencer for use as a real-time Bluetooth baseband 1 2 controller comprises: 3 timer circuitry operably coupled to receive a requested timer counting value and to 4 announce when the timer counting value has elapsed; temporary data storage circuitry operably coupled to store data, wherein the temporary 5 6 data storage circuitry includes registers of different size; a data storage logic module, wherein the data storage logic module determines which 7 available register should be used for storing data based upon the size of the data that is to be 8 9 temporarily stored; a plurality of Bluetooth and native clocks operably coupled to support timing 10 functionality of the timer circuitry according to Bluetooth specifications when in a master mode; 11 12 and a plurality of externally-driven Bluetooth and native clocks operably coupled to support 13 timing functionality of the timer circuitry according to Bluetooth specifications when in a slave 14 15 mode.

## Claims 18 - 21 (Cancelled).

1

2

- 1 22. (original) The microsequencer of claim 17 wherein the temporary data storage circuitry includes a 64-bit storage register.
  - 23. (original) The microsequencer of claim 17 wherein the temporary data storage circuitry includes a 48-bit storage register.
- 1 24. (original) The microsequencer of claim 17 wherein the temporary data storage 2 circuitry includes a 32-bit storage register.

- 1 25. (original) The microsequencer of claim 17 wherein the temporary data storage 2 circuitry includes a 16-bit storage register.
- 1 26. (original) The microsequencer of claim 17 wherein the temporary data storage 2 circuitry includes a 64-bit register, a 48-bit register, a 32-bit register and a 16-bit register.
  - 27. (cancelled)
- 1 28. (previously presented) The microsequencer of claim 17 wherein the timer 2 circuitry comprises at least four timers.
- 1 29. (currently amended) The microsequencer of claim 17 wherein the timer circuitry comprises at least eight timers.
- 1 30. (currently amended) The microsequencer of claim 27 claim 17 further comprises 2 timer control logic circuitry for controlling the operation of the at least eight timers.

(original) A microsequencer for use as a real-time Bluetooth baseband controller, 1 31. 2 comprising: 3 eight timers to provide traditional timer functionality; 4 timer control logic circuitry; 5 an externally driven Bluetooth clock; 6 an externally driven real-time clock; 7 a native Bluetooth clock; a native real-time clock; 8 a 64-bit register for temporarily storing computational data; 9 a 48-bit storage register for temporarily storing computational data; 10 a 32-bit storage register for temporarily storing computational data; 11 a 16-bit storage register for temporarily storing computational data; and 12 data storage logic circuitry for determining which of the temporary storage registers is to 13 14 store a piece of data that is to be temporarily stored. 32. (original) The microsequencer of claim 31 wherein the period of one Bluetooth 1 2 clock cycle is equal to 312.5 real-time clock cycle periods. 33. (New) The microsequencer of claim 17 wherein the plurality of native and 1 externally driven clocks include an externally driven Bluetooth clock. 2 1 34. (New) The microsequencer of claim 17 wherein the plurality of native and 2 externally driven clocks include a native Bluetooth clock. (New) The microsequencer of claim 17 wherein the plurality of native and 1 35. 2 externally driven clocks include an external real-time clock. 1 36. (New) The microsequencer of claim 17 wherein the plurality of native and 2 externally driven clocks include a native real-time clock.
